Part of Paper No.____

Art Unit: 1616

Receipt is acknowledged of IDS (8/19/02) amendment of 10/28/02 and IDS of 11/8/02, an appearant Duplicate of the originally entered amendment was also received, (10/28) but was not entered, as the claims do not indicate "amended twice". Still a third, and 4th copy were received, again, not entered, on 10/29/02.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1-23, 26 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The rejection of record is maintained, to the following extent. The rejection to long chain is maintained, as no definition is present, and examples are at 16 carbons, but, 5, 6, 7 may be construed as Long - if in fact, 16 is minimal, we see support as suggested by the phrase including 16 c, at P.16. They're in no spinosap, spinosyn A, spinosyn D, or any component produced by spinosa, (Saxchara-prineser) in claim 1. Therefore, claim 3 has no antecedent basis. Finally, please reconsider amending claim 1 "R" is not an action this examiner is familiar with, in this formula. There is no antecedent in claim 1, for claims 4, 5, 6, 7. Please insert the specification of Spinosad, spinosyn A, D and R in claim 1; and drops the "any component-", as that language would not seen to constitute any structural form within the confines of the claimed structure as drawn. "Any component", would constitute a patentably distinct species separate trans the identified structure. In claim 26, no ranges are given/ trace amounts

Art Unit: 1616

of everything, in any vehicle, for any purpose, would be permissible, and is not definitively claiming the instant invention.

Claims 1-23 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The will maintain this rejection, in spite of difference to applicant's arguments, because testing each and every one of the "any component – at least quantitatively, an excessive amount of experimentation, requiring both adult and nit determination of unstated levels of lethality for each component.

Claims 1-10, 12-23 are rejected under 35 U.S.C. 102(e) as being anticipated by Snyder - 6063771.

The rejection of record is maintained applicant has not declared Snyder to be the instant inventor, or 6063771 take of the instant assignee.

See col. 14, Bn Snyder was aware of the use of solvents for spinosyns; the instant composition are included in Snyder's array of composition, all suitable for adult lice and nit destruction – Snyder also Looks for their removal (col. 14, lines 40-43) and adds advantageous optional hair care ingredients (as at col. 14, C).

Applicant's arguments filed 1/28/02 have been fully considered but they are not persuasive. Applicant argues Snyder is for dispersions, not solutions, but the Snyder compositions mimic those as claimed, of the instant invention, and include solvents.

Snyder also is non-limiting advantageous formulations permit of hair care, in addition to good riddance of line. We would argue the lach of solution, of alcohol with water – we

Art Unit: 1616

would see applicant's formulations as emulsions or dispersions. See claim 13, to particular.

Claims 1-9, 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Boeck et al – EP 0375316.

Insecticide spinosyns, including A and B are disclosed (Page 3, line 14+) with solubility in alcohols – (p. 17, line 36+) with other components of Sacch spinosa, in solution (p. 46, lines 15-25) if desired – for topical ecto parasites (lice are ecto parasite) control. This meets the compositions as instantly claimed, regardless of intended use see Example 13, D. Toximal & stabilizers maybe used (p.28, bottom).

Claims 1-7, 9, 10, 12-16, 22 are rejected under 35 U.S.C. 102(e) as being anticipated by Kassebaum- WO 01/12156.

Ectoparasiticidal levels of spinosyn (.01-25%) in solvent systems for topical application are taught, with the instant non-specific "stabilizing" agent, a long chain fatty acid ester, isopropyl myristate (p.2). The spinosyns are A, D, spinosad and fermentation products of 5. spinosa (page 4, line 15-20). Additives are stabilizers, antioxidants, viscosity modifiers, and other carriers, excipients, adjuvants (p.7, lines 24-28) art recognized. Solvents include benzyl alcohol (p.7, lines 20-23), 0.26% spinosad was very effective to kill lice (Table II). Additional instant stabilizers are seen as acids (p.6, bottom). These are at .61% (Example 4, a)) also seen as pH adjusters. Propylene glycol may also be present, as are emulsifier, limonene, and emulsion stabilizers, n-methyl pyrrolidone with conditioners, triacetin (p.10).

Art Unit: 1616

Applicant's arguments filed 10/29/02 have been fully considered but they are not persuasive. Applicants arguments, to the extent persuasive, have resulted in withdrawal of rejections, but, Examiner finds Snyder to be the same as applicant invention – lice treatment with spinosad S and D, in some of the same compositions as are claimed, while Boeck and Kassebaum also exemplify known use of spinosad, with use of the same and similar adjuvants although the applicant's Vehicle formulation is known in the topical application/ cosmetic arts, shown by examiner and by applicant, in regard to the Mencke and Reid. Insecticidal topical compositions, no recognition of solvating spinosad is disclosed, and without recognition of the low levels required to provide efficacy, examiner questions whether one would be motivated to cobble together the particular amounts of adjuvants applicant utilizes in order to provide an acceptable, less toxic nit and Louse Killer applicable to human use, as of applicant's claim 25.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Neil Levy whose telephone number is (703)308-2412. The examiner can normally be reached on Tuesday through Friday 7 AM to 5:30 Pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jose Dees can be reached on (703) 308-4628. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 308-4556 for regular communications and (703) 872-9307 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-1235.
